

Analysis of shipping Data in Q1 and Q2, 2024

Phattaradanai Sornsawang, Nipatsa Chainiwattana and Puthipong Yomabut Department of Computer Engineering, Mahidol University, Nakhon Pathom Thailand

INTRODUCTION

This project aims to analyze and study Thailand's shipping data for the first two quarters of 2024 using data analysis techniques and statistical processing. The goal is to identify trends in export changes across various product groups. Additionally, we will investigate factors influencing shipping based on the analyzed data. The information used in this study is sourced from the Data Science CMU Project Contest 2024 and has undergone data cleaning processes to ensure analytical accuracy. The results will provide an overview of the export structure and can be utilized for effective strategic planning by companies in the future.

OBJECTIVES

- Utilized the available data to build an innovation that helps either the organization, the data provider, or national development.
- The project must demonstrate the application of data science techniques and analysis to achieve practical result.
- Cleansing data to ensures accuracy and consistency of data, making it easier to analyze and derive meaningful insights.
- Using cleaned data to find insights and create a dashboard for clearer visualizations and more effective decision-making.

DATA AND METHODOLOGY

Data Source: The dataset is from Data Science Project Contest 2024

Steps in the project

Original Dataset

	BILL_INDEX	BILL_DATE	CONSIGNEE_TAMBON	CONSIGNEE_AMPHUR	CONSIGNEE_PROVINCE	CONSIGNEE_ZIPCODE	ITEM_CODE	ITEM_DESCแสดง หน้าบิล	ITEM_NAMEใน ระบบ
0	0	20240301	ฟ้าฮ่าม	เมืองเชียงใหม่	เชียงใหม่	50000	10105.005	เอกสารโอที ขนส่ง+โอทียาน ยนต์+เบี้ยเลี้ยง นอกสถาน	เอกสาร
1	1	20240301	ฟ้าฮ่าม	เมืองเชียงใหม่	เชียงใหม่	50000	10105.005	เอกสาร	เอกสาร
2	2	20240301	ฟ้าฮ่าม	เมืองเชียงใหม่	เชียงใหม่	50000	10105.005	เอกสาร	เอกสาร
3	3	20240301	ฟ้าฮ่าม	เมืองเชียงใหม่	เชีย <mark>งใ</mark> หม่	50000	10105.005	เอกสารใบสมัคร งาน	เอกสาร
4	4	20240301	ป่าสัก	เมืองลำพูน	ลำพูน	51000	10601.229	สินค้าตกค้าง/กัน กระแทก	สินค้าตกค้าง

Clean Data with Python

Finding insights from Dashboard

RESULT

- Gain higher quality and more complete data.
- Gain dashboard that can summarize and compare data by province, region, and specific product type

Example: Region: Upper Northern zone, Month: March, Province: Chiang Mai

CONCLUSION

Provinces

- Top: Chiang Mai and Bangkok
- Bottom : Uthai Thani, Yala and Ranong

Shipping month

- Top: March
- Bottom: April

Weekly Trends

- Top: All of day **except** Saturday and Sunday
- Bottom: Sunday

Top regions

- Top: Upper Northern zone and then Central zone
- Bottom:-
- **Top items**: cloth, flower, equipment, spare part and clothing in that order.
- Recommendation: Adjust operations to match high-demand periods.
- Future Improvement: Propose using deep learning for better object detection and accuracy.

<u>Suggestion</u>

- Calculating delivery distances for each branch can optimize routes and reduce transportation costs, including fuel expenses.
- Utilize deep learning to detect objects and auto classify their labels.
